ACKNOWLEDGEMENTS

I systematized the presented in this book series information thanks to many people assistance. These people helped me to become who I am. Thank you all.

I express special and deep gratitude to my patient, wise, and beloved wife Nataliya for her love, support and understanding. "The New Cosmic Philosophy" research work is dedicated exactly for her.

WARNING!

Different people have different life experience and, as a result, their own worldview.

Therefore, neither the author nor the persons relating to the creation, publication, and dissemination of this book series (articles) can provide any reassurance beforehand. They also do not take responsibility for any real or unreal physical, mental, emotional, psychological, spiritual or any other harm to reader's health, as well as for any disease recurrence in view of this book series (articles) reading.

That is why every reader makes decision on his own whether to read the materials provided. Besides, he is absolutely responsible for any real or unreal harm the reader can interpret as a consequence of this book series (articles) reading.

Do not gain knowledge you will not be able to make good use of

“...Do not gain knowledge only to thine undoing. Remember Adam.

Do not obtain that which ye cannot make constructive in thine own experience and in the experience of those whom ye contact day by day.

Do not attempt to force, impel or to even try to impress thy knowledge upon another. Remember what the serpent did to Eve.

In the studies, then, know WHERE ye are going. To gain knowledge merely for thine own satisfaction is a thing, a condition, an experience to be commended, if it does not produce in thine experience a feeling or a manner of expression that you are better than another on account of thy knowledge. This becomes self-evident that it would become then a stumbling block, unless ye know what ye will do with thy knowledge.

As to the manners of interpreting - these may be observed, these may be made constructive by the study of those influences that in the associations and dealings with thy fellow man ye have had weaknesses, inclinations. These are mental, not material things, though they may have brought material activity. Warnings, constructive activity in warnings, then may prove to be of helpful experience in the activity of any individual group.

Then, such a study is WELL - if ye know whither ye go.

If ye do NOT know whither ye go, ye had better leave it alone!”

Edgar Cayce

“Readings” (5753-1)

Edgar Cayce is the author of the clairvoyant statements mentioned above. I will often cite similar protreptics from his “Readings” in my research as they describe the nature of objects, processes or phenomena we discussed.

For reference use:

Edgar Cayce died on January 3, 1945, Virginia Beach (Virginia State). He created more than 14,000 clairvoyant statements during his forty-three years’ lifetime. In short, these typescript documents called “Readings”. They present the greatest and the most impressive experience one person has never ever possessed. Containing the relevant records, letters, and reports, they are provided with thousands of subject headings to make this information comprehensible for psychologists, students, writers and researchers, whose number is still increasing.

1. Introduction

*Daughter's art assignment in the 5th class was to draw an alien.
She did her best.
However, she got a bad mark and a remark in her diary:
"SUCH ALIENS DO NOT EXIST!"*

*Somehow, a man's conversation with God is called prayer requests,
Just as God's conversation with a man is called schizophrenia...*

The ["Chemistry and Life" №1, 1977 magazine](#) was the first publishing the interview between K. E. Tsiolkovsky and A. L. Chizhevsky under the title ["The Theory of Cosmic Eras"](#). The information from this interview has never been published and never been discussed by K. E. Tsiolkovsky before. He had his own reasons for it.

"There are questions we can give answers to, even if they are not valid but satisfactory for now. There are issues we cannot talk about, we cannot discuss, argue or agree over. However, there are questions we cannot pose to anyone or even to ourselves, but surely ask them in the moments of the best world understanding. These questions are: what's the object of doing that?"

"The question limits to the following: Why does this world exist and what is our destiny in it..."

“But I assure you that this problem is not a trifling matter as someone suggests. This problem is of great and inmost philosophical importance we afraid even to talk about...”

It is time to make efforts to answer the questions acquisitive minds of the over past epochs were interested in, the questions, modern researchers are still concerned.

Who are we? Where are we from? Where do we go?

Who is a Human Being?

Do any Gods exist?

This research work is dedicated exactly to answer these and similar questions.

I am not a professional writer and that is why, please:

**Do not follow the letters,
Follow the thought.**

“Mankind sink into PESSIMISM. The gravest despair spreads among scholars and people who are involved in natural sciences. People are depriving of belief in immortality, judgment and Supreme Being. It is possible to do anything you want, if only people will not find out the truth and, as a result of unawareness, they will not punish you for misdoings. Only ignorance of majority and a strong belief restrain a primal drive of people. Strong persons put the faith aside for a nation. They waged war against the lower classes, plundered and exploited them. At least, they could no longer be afraid of the afterlife judgement.

DEEPER CONSIDERATION OF THE SPACE SACRAMENTS REMINDS THE IDEA OF ETERNITY, JUDGEMENT AND SUPREME BEINGS IN A MODIFIED WAY. The generated consolation is extremely predominating over the old belief.”

Konstantin Tsiolkovsky

“What to do on Earth?”

1928.

All the history of science is the history of a paradigm shift, the history of ideology change. In a particular period of time, these changes were adopted by the scientific community under the influence of the established scientific tradition.

The Humanity develops within this paradigm in any period of time. The paradigm shift eventually influences the development trend of the Humankind.

The paradigm shift is always a painful process, because a fundamental ideology change ALWAYS conflicts with the current firm views of scientific tradition.

It is time not only for the paradigm shift of “A Human Being” concept, but also for a lot of concepts related to it.

The consequences of the current paradigm are obvious for everyone: human body and organism are “diagnosticated” and “treated” separately. Human body and organism are the most complex objects; they are comparable by their complicatedness to the Universe. For this purpose, it is reasonable to perceive a Man and the outside world (more correct to talk about the World of the certain Man) as a whole, i.e. with all connections.

The cause of almost all modern problems of the Humanity is that a Man does not know himself and his place in this world (in the broadest sense of this word). Therefore, having no answer for the question “who is ‘A Human Being’”, it is useless to “treat” “diseases” of a Man, to produce “useful” devices and facilities for him, to create new principles of any properties management and to discuss the government or planetary control issues.

A Man suffers from delusions of grandeur. Besides, a number of the posted on YouTube.com service videos prove that UFOs (unidentified flying objects) become IFOs (identified flying objects) soon. The number of videos is really impressive... At least, this information requires any explanations. Due to lack of information, these phenomena remain inexplicable from a modern science viewpoint.

The idea of spiritual development was professionally replaced by the concept of religious belief. Many people do not see any difference in these two concepts. Moreover, it has become dangerous for both an individual and the whole humanity altogether.

**Every Man has a choice
either to KNOW or to BELIEVE.**

But:

**Those believe who do not know.
Believe those who claim to know.**

However, the difference between BELIEF and KNOWLEDGE is delusive. I can insist on the following today: I KNOW that gods exist and I am ready to get out this knowledge gradually across the reader, having developed a simple and comprehensible **mathematical representation of God** for a wide readership.

The worldview of a human creature is neither more than his personal perceptions of the world around; exactly these perceptions define the most common understanding of his World. I feel up to help everyone who wants to “bring together” his own belief system.

This is belief system assigns a specific meaning to the activity of every human creature and allows to make sense of his existence.

**I am not the author of this belief system,
although it is worldview of my own.**

This book series is very useful nowadays, because one shouldn't speak and write about many things even at the beginning of the XXI century.

In particular, one shouldn't speak about all the people's difference...

Just take a good look at their faces...

That is why “owners” (“chief executive officers”) of the largest world countries strain after globalization and make great efforts to ensure all people in their similarity. Besides, these leaders make people live under the same, invented by them “rules” or “laws”.

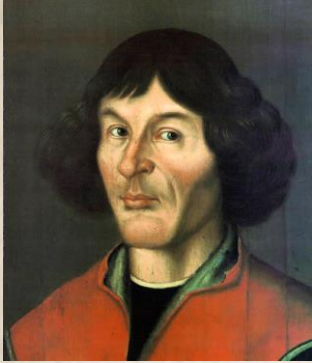

But one cannot create “Laws” and “Principles” without proper understanding of a creature under symbolic name - “A Man” ...

The question remains unclear: is there any standard of “normality”?

In spite of it, there are a lot of people who consider themselves to be “normal”. They always do their best to make you become similar to their so-called “normal” status, just the same they are.

2. Foreword

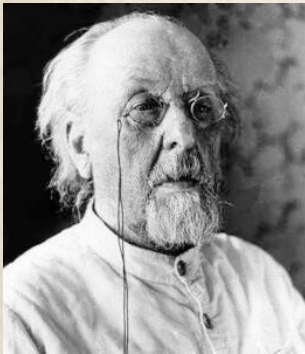

2.1. "Stories" of researches

"Those who know that the consensus of many centuries has sanctioned the conception that the earth remains at rest in the middle of the heaven as its center would, I reflected, regard it as an insane pronouncement if I made the opposite assertion that the earth moves. Therefore, I debated with myself for a long time whether to publish the volume which I wrote to prove the earth's motion or rather to follow the example of the Pythagoreans and certain others, who used to transmit philosophy's secrets only to kinsmen and friends, not in writing but by word of mouth...."

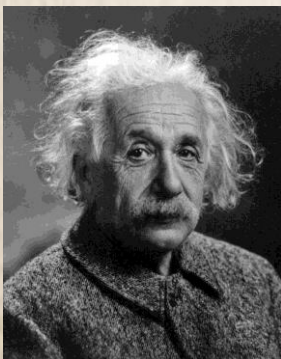

[Nicolaus Copernicus](#)

De revolutionibus orbium coelestium
(On the Revolutions of the Celestial Spheres),
1543

"Perhaps, many people are not ready for interference of other beings in their life. Perhaps, it would cause a harm to the modern society".

[Konstantin Tsiolkovsky](#)
["The Will of the Universe"](#)

"Everything should be made as simple as possible, but not simpler."

[Albert Einstein](#)

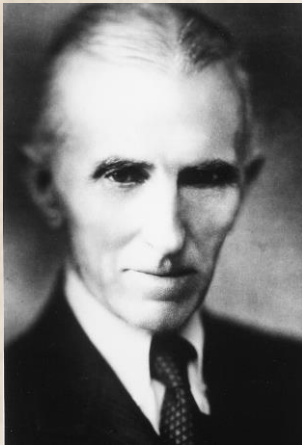

"In giving that as we find that may be helpful in such an experience, first they of the group should each determine within their own mind WHAT is evidence; and then be sure that is NOT evidence to thy neighbor. For we are not all of one mind, and evidence or knowledge is an individual experience - and must be experienced. "

"Readings" (5753—2)

"...Hence, in man's analysis and understanding of himself, it is as well to know from whence he came as to know whether he is going...."

[Edgar Cayce](#)

"Readings" (5753—1)

"I will never reveal secrets of this amazing impact of a human subconscious on our World failing to imbibe such a high level of knowledge. ..."

"Taking into account my discovery of a brain impact on the ether bodies, transforming then into natural phenomena, it is possible to predict that one day a future man will be able to control lightings and to rain down like the Olympic gods did."

"My brain in only a container of information. In space, there is some core we derive our knowledge, strength and inspiration from. I failed to penetrate into secrets of this core, but I am sure of its existence."

[Nikola Tesla](#)

"The Visions of the Future"

"Let me remind that you always have a choice. However, there is an ancient Chinese wisdom: «All misfortunes grow from ignorance». Do you want to get victories through difficulties or suffer from misfortunes without any difficulties? Did you notice incorrectness of this question? Misfortunes will bring so grave difficulties compared to which the difficulties you experience during self-improvement will seem negligible!"

"I started my Way, and I can't help those who cannot even wish and make an attempt to do a thing uniquely important for their lives on the Earth - it is IMPOSSIBLE to make a person be decent and clever! Alas!"

Enjoy good health and be genuinely happy, if you'll be able to!"

Jacob Baytin

"A man and a woman create child without knowledge of a human being, his brain and consciousness capacity... Do not have a sense of grandeur about yourself and remember: your child is a soul trusted to you for a temporary caretaking."

...

"You look into the eyes of your interlocutor and realize that this entity cannot brim with a smart look. You see the flesh, but communicate with invisible spiritual essence."

[Yuri Larichev](#)

["The Slavic Veda. The Hermetic Philosophy in a Readily Understandable Format. The Gospel for Myself."](#)

2.2. My “stories”

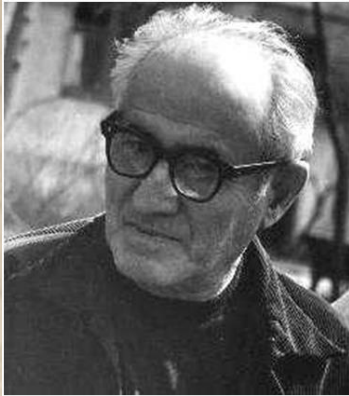

It is hard to say where did all the things take place. Nevertheless, I will do my best to reconstruct the course of events.

1973. During my unsuccessful attempt to enter the Moscow Institute of Physics and Technology (the entrance examinations of the most famous higher educational establishments of the USSR were assigned month before than in other educational institutions) I attend a speech of Wolf Messing “purely accidental”. This speech left unforgettable experience within my memory.

[“Wolf Grigorevich \(Gershikovic\) Messing](#) (10 September 1899, Góra Kalwaria, Poland — 8 November 1974, Moscow, USSR) is an honored artist of the RSFSR, an entertainer demonstrated his psychological experiments of the audience ‘mind-reading’.”

1974. As a student of the Electronic Engineering Faculty, I, assisted by one of the teachers from the Radio Engineering Department, tried to examine devices for “Kirlian” and “Baxter” effects.

["Semyon Davidovich Kirlian](#) (20 February 1898 — 4 April 1978) is a soviet physiotherapist, inventor and researcher. Along with his wife Valentine Hrisanfovna he developed collection of photographic techniques used to capture the phenomenon of electrical coronal discharges. This technique has been variously known as "electrography", "corona discharge photography", in Russian literature 'Kirlianography'."

It is "Kirlian effect" sets in motion researchers' minds who have begun to argue that this corona discharge is "the very same elusive biofield".

The military-industrial complex quickly made use of the technique based on Kirlian effect in many spheres including space, earth and water.

The civil scientists also kept apace with this technique. It was used even during the world championships in ice hockey. The purpose was to determine energy levels of the bodies of the USSR team players.

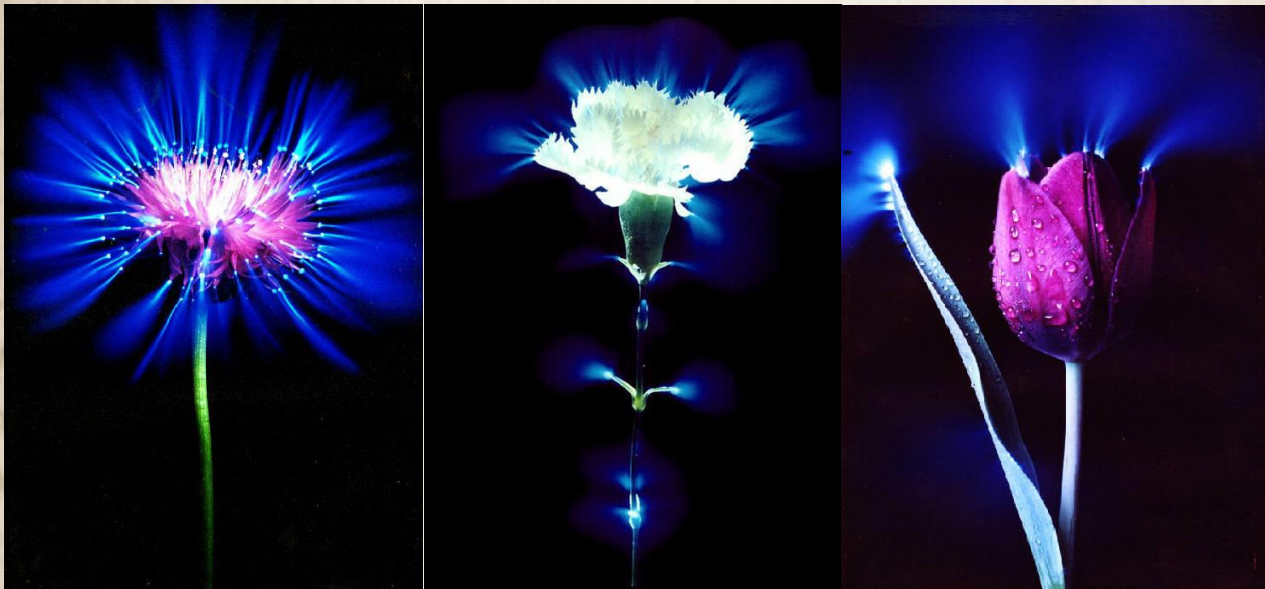

Today the development of Kirlian spouses is protected by twenty-one copyright certificates.

It is worth mentioning that since 1939 many academic journals refused to publish experimental data Kirlian spouses obtained. "The Young Technician"

was one of the first journals publishing this material. Many foreign inventors get inspiration for “their” discoveries and patents from this journal.

Today is almost everyone can assemble the instrument for “Kirlian effect” examination with his own hands.

The corona discharge on flowers looks like this:

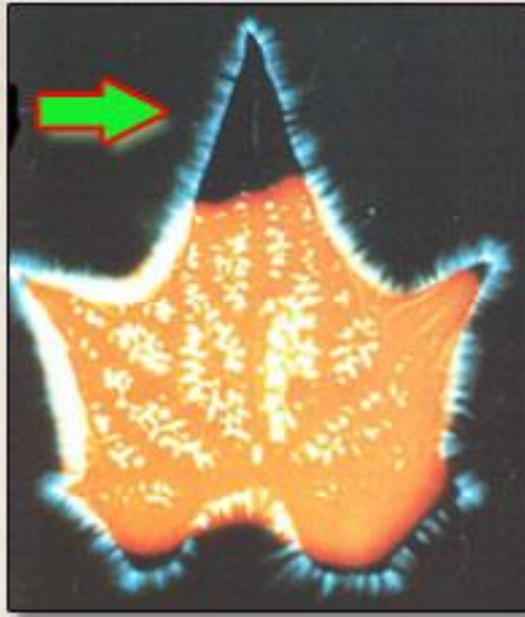

And this is its demonstration on a finger tip:

The most important discovery Kirlian spouses made was their idea about information storage of an object, where exists even a part of it that is already damaged or non-existent. For example, the corona discharge of a lacking (ragged before) leaf:

The published on 02.02.1966 message of American researcher Cleve Baxter put everyone into an embarrassing situation. He claimed that he was aware of plants ability to think, to feel and to understand thoughts of a man. This claim led to protracted dispute lasting even nowadays.

Little by little, I began to study everything related to this subject.

“Every clever person should base upon knowledge acquired by his outstanding predecessors and genius contemporaries. Only then he can add a part of his own experience to the wealth of knowledge.”

Konstantin Tsiolkovsky
“Ethics or Natural Ethical Principles”
1902 - 1903.

Since 1978, as a regulator engineer of a radio equipment, I visited almost all republics of the former Soviet Union and many countries of the world, including Europe, Asia and Africa. During my business trips, I often met a variety of interesting people possessing unique knowledge. Besides, I learned and analyzed the accumulated by outstanding representatives experience.

Life contains a lot of questions and prompts ...

Psychics, magicians, charlatans, interesting people ... The communication with them makes me think, look for answers on the Internet, read books, watch documentaries and different videos, and think again ...

There were different words (terms) in my dreams I never ever heard before. I can easily find them on the Internet that helps to interpret my dream content. During my study of this phenomenon, it turned out that a lot of outstanding scholars such as Mendeleev (practically “fitted together” his most famous periodic law in a dream) and Landau (a soviet theoretical physicist, Nobel prizeman for physics in 1962 who was used to having a pen and a piece of paper near the bedside table to notate his dream content) knew how to make a good use of their dreams content. I make an example of the scientists not only because they had similar dreams, but because these facts are well documented.

One day I fell asleep driving a car (about 4 am) on the way to the Moscow city. I was awakened in my dream by someone telling me that I was sleeping and explaining in detail how can I open my eyes. I woke up and saw approaching on a high-speed road, which was in the headlights. I stopped my car and went to rest. Until now, I remember many details of this dream.

September 11, 2001, New York city. Terrorists destroyed the Twin Towers of the World Trade Center in Manhattan. This event is well-known to many people. However, the media sources informed the US government about dozens of people around the world warning against possible oncoming of this event. One can only guess about hundreds or even thousands of people whose information do not become the property of media sources. Moreover, many of them argued that in a night dream someone addressed them with a request (some of them claimed God 's interference) to warn the US government how to avoid human losses. These people described in details not only the fact of passenger planes impinging on the Twin Towers, but also many other events preceded this act of the terrorism a few days before. In most cases, the US embassy staff did not even take into consideration such people... and their information grabbed media sources thanks to correspondents of the certain newspapers or magazines.

In August 2010, I gave up smoking, although I have been doing it since the early childhood. The whole process took less than 1 minute. Moreover, it happened without using of any medicines and without doing special exercises. The story looks like this: I and my friends came out of the theater. I took out a cigarette to smoke. The voice I heard inside explained me in audibly, briefly and rather strictly manner that I had no time for decision making, either I do not smoke that cigarette or I'm going to die in the next few minutes... I felt it to be merciless truth "with every fiber in my body", and I began to laugh loudly, attracting the passers-by attention. On my wife's question, what had happened, I answered: "You will never believe. I just give up smoking." I immediately stopped smelling a cigarette smoke after this event, even though all other smells I felt well enough. Hence, my process of smoking leaving off was a "piece of cake". A few months later, I began to smell a cigarette smoke again but I had no desire to smoke ...

I began to look at "details" and made sense of my actions (even mental ones) and events occurred after ... At the beginning of these researches the time period between my thought (action) and reaction of my World on it was defined in days or even weeks, and during my book series writing this time period practically disappeared...

The situation looks like this: during my birthday celebration, I wanted to tell the (reasonable, in my opinion, for one of the guests) anecdote. I just having

opened my mouth like an invisible hand squeezed my heart, so I was sitting with my mouth open and could not say anything. And when I mentally refused to do this, that invisible hand relinquished my heart. On my guests' question, why did I not tell anything, I said: "I wanted to tell the anecdote but forgot its details. I will definitely tell you when recalling it."

Is it possible for a dream to become true? For me, the answer is unambiguous now - YES! And this answer based not only on the information from dozens of different books but on my own experience too.

One night I had a very realistic dream. I defended the five-year-old girl, a daughter of my good friends, from some monsters I couldn't even describe. The next day when visiting them (imagine my surprise) her mother said: "I woke up this morning and saw my daughter sat and moaned in the middle of the room. I jumped up and ran to her. She told me: "The terrible beasts wanted to kill me this night but Uncle Nick saved me"

I've seen a lot during my life and believed I would never be able to feel intense fear. I behaved consistently, calmly and prudently, when occurring critical situations, but people around me were actually "frozen", i.e. they could not move freely; they could not make adequate decisions, they often could not

even speak. But I was wrong. Once I experienced such a terror in my dream, which could not be described even today ... I screamed, I woke up in a cold sweat, my body have been trembling for a long time after this ...

Can a man interpret dreams content and how to do it properly? The definition of the “dream interpretation” is the following: the description of an object, process or phenomenon understandable for an individual. Therefore, a word meaning depends on the world of the certain person trying to interpret his/her dream content. For example, “I made a good meal today” expression is of quite different meaning for an oligarch and for a homeless. As a result, any leftovers in a dream will influence them completely different: one of them will be “joyful” while another one will be “sorrowful” after waking up.

The city, I am leaving now, is 250 years old. The history devotees found a great number of prehistoric animals’ skeletons practically in a radius of 10 km. from the city center. This finding includes mammoths (southern mammoths) whose skulls were pierced with ancient tools for hunting. These people lived here a long time ago. According to many scientists, these mammoths disappeared more than 11,000 years ago.

I provide you with a photo of a spinal bone below and one more photo of a bone of southern mammoth that were killed by ancient people.

2.3. “Stories” generalization and systematization are the keystones of every science

Recently, I saw “**History** of the Mankind” book series on the antique shop counter. I immediately understood that these books should be entitled a little bit different, namely “**Stories** about the Mankind”.

Here is why.

Every person hears, reads, studies, watches, systematizes, summarizes, realizes ... different “stories” from the early childhood. The place of a human being is defined by a number of systematized (realized, generalized) “stories” in the modern scientific community:

- a human being who systematized (realized, summarized) very little number of “stories” is a typical person;
- a human creature who systematized (realized, summarized) a little bit more number of “stories” become a teacher of other people;
- a human being who systematized (realized, summarized) many “stories” receives the Philosophy Doctor degree in the world of science and became a full member of a certain academy.

“Stories” can be different:

- If it is systematization of the archaeological materials, ancient manuscripts, etc., then a human being, systematizing these materials, is promoted to a historian, a history teacher, a candidate of historical sciences, a doctor of historical sciences ...
- If it is systematization of the medical histories of human bodies, then a human being, systematizing these materials, is promoted to a doctor, a candidate of medicine, a holder of a post-doctoral degree in medicine ...
- The same thing is with other sciences...

That is why every human being who is seriously involved in “stories” systematization (generalization, realization) in any realm of science is a “doctor of philosophy”.

2.4. The sources of “stories”

The sources of “stories”, the author is interested in, can be classified in different ways.

For example:

- **according to organizations and movements conducting the research of my interest:**
 - [Masonry](#) (English Cyrillic: Freemasonry, French Cyrillic: Franc-maçonnerie);
 - [Rosicrucian Enlightenment](#) (Rosicrucianism, Rosicrucian Manifestos, “The Rosy Cross”);
 - [Illuminati](#) (German Cyrillic: Illuminatenorden, from Lat. illuminati — “enlightened”);
 - [Thule Society](#) (нем. Thule-Gesellschaft);
 - [Ahnenerbe](#) (German Cyrillic: Ahnenerbe — “inheritance from the ancestors”, full name is “the Study Society for Primordial Intellectual history, German Ancestral Heritage”);
 - [Vatican City](#) (Latin Cyrillic: Status CivitatisVaticanæ, Italian Cyrillic: StatodellaCittà del Vaticano);
 - [Central Intelligence Agency](#) (CIA);
 - [KGB](#) (abbr.: officially Committee for State Security of the USSR)
 - ...

- **according to religions and religious worldview using the most ancient written sources:**
 - [Judaism](#) (Greek Cyrillic: Ἰουδαϊσμός);
 - [Christianity](#) (Greek Cyrillic: Χριστός — “annointer”, “Mashiah”);
 - [Islam](#) (Arabic Cyrillic: الإسلام [al-Is'la:m]);
 - [Indian religions](#) ([hinduism](#), [buddhism](#), [jainism](#) and [Sikhism](#));
 - ...
- **according to ancient civilizations one can judge by today found artifacts:**
 - [Sumer](#) was the first urban civilization in the historical region of southern Mesopotamia (the valleys of the Tigris and Euphrates);
 - [Cucuteni-Trypillian culture](#), c. 5200 to 3500 BC. It extends from the Carpathian Mountains to the Dniester and Dnieper regions, its heyday is the period between 5500 and 2750 BC.
 - [Ancient Egypt](#);
 - [History of China](#);
 - [Inca Empire](#);
 - [Aztec](#);
 - [Maya civilization](#)
 - ...

- **according to researchers who lived in the 19-20 centuries, and whose activities are well documented today:**
 - [Helena Petrovna Blavatsky](#) (nee Gan, German Cyrillic: von Hahn; 31 July [O. S. 12 August] 1831, Yekaterinoslav, the Russian Empire — 26 April [8 May] 1891, London, England);
 - [Konstantin Eduardovich Tsiolkovsky](#) (17 September (O. S. 5) 1857, Izhevskoye, Ryazan Oblast, the Russian Empire — 19 September, 1935, Kaluga, the USSR);
 - [Wolf Grigorevich Messing](#) (10 September 1899, Góra Kalwaria, Poland — 8 November 1974, Moscow, the USSR);
 - [Edgar Cayce](#) (18 March 1877, Hopkinsville, Kentucky, the USA — 3 January 1945, Virginia Beach, Virginia, the USA);
 - [Nikola Tesla](#) (Serbian Cyrillic: Никола Тесла; 10 July 1856, Smiljan, Austrian Empire (modern-day Croatia) — 7 January 1943, New York, the USA);
 - [Grandmother Vanga](#) (Vangeliya Pandeva Gushterova, nee Dimitrova; 31 January 1911, Strumica, the Ottoman Empire — 11 August 1996, Petrich, Bulgaria);
 - [Ninel Sergeyevna Kulagina](#) (30 July 1926 — April 1990);
 - ...

- according to the modern researchers:

- [Steven Frayne](#) born 17 December 1982, commonly known by his stage name “Dynamo”, is an English magician. The birth place: Bradford, West Yorkshire, England
- ...

There are so many researches and everyone, of course, contributed to the mankind development.

“Thus, the sources of knowledge are our reason and affections. Sometimes, we intuitively perceive only the Universe, and sometimes, we perceive it by the help of other human creatures who already passed from their life but left us a lot of their works...”

[Konstantin Tsiolkovsky](#)

[“The Ethics or Natural Ethical Principles”](#)

1902 - 1903

2.5. Every researcher chooses his own path

I do not want to hurt anyone's feelings but I just cannot physically list all the reputable researchers on these pages. I give examples of researchers who used different ways to deliver their information to the humanity:

- The study of [Carlos César Salvador Arana Castaneda's](#) books showed that he used various hallucinogens in his researches to be in the specific state of the world perception (today called the **MODIFIED** state of consciousness). I would like to emphasize that affection on a person's brain mechanically (for example, to strike over the head with something heavy) or chemically (for example, to dope up, to drink a stiff dose of an alcohol), or in a similar way, is the modified state of consciousness. Almost everyone knows about the real quality of a human cerebation in such a state. The researchers are very close to it when practicing decrease or increase of a blood or an oxygen, or another supply to a human brain for the visions emergence... including holotropic breathwork and continuous body turning, and many other things.

I am almost tempted to say: "Please, do not confuse **GALLUCINATIONS** with an **EXTRASENSORY PERCEPTION**. These concepts are, as people say in Odessa, "two big differences".

It is the modified state of consciousness was used by many “mentors” to fool and to bring human beings under their umbrella in antiquity and even today. The variety of hallucinogenic substances, previously extracted from various plants, fishes, insects were used exactly for this purpose, but today they are simply synthesized ...

Carlos Castaneda preferred to be an esoteric thinker and a writer, having become the author of the many best-selling books ...

- The study of [Edgar Cayce's](#) “Readings” showed that he predicted the future and described a distant, a very distant mankind and Earth planet past in details. He carried out his “claircognizance” experiments in the presence of that time academic representatives. A lot of really confirmed “sensory perception” results in the “real-time” regime and the absence of any mechanical or chemical effects on his body allowed to assume about his ability to work in unmodified state of consciousness, i.e. about a great probability of his correct interpretation of the things he saw. Edgar Cayce decided to deliver information to people in the form of so-called “Readings” his assistants wrote in details. These “Readings” are available today for everyone willing to study them.
- [Wolf Messing](#), an “artist” in fact, but a “prophet” in law chose another way of his knowledge conveying. It was the way of **a concert activity** presenting different human capacities.

- [Albert Robida](#), [Jules Verne](#), [Herbert George Wells](#), [Alexander Belyayev](#) are “fantasy writers” in fact, but “prophets” in law. Their purpose was to create **fantasy fictions**.
- [Nikola Tesla](#) is an inventor in fact, but a “prophet” in law. Nikola realized that wars destroyed the humanity. His main task, in his opinion, was **to create the opportunity for every person to have a free energy (electricity) access**. This was supposed to save both an earthman and the whole humanity from the wars. He gave up on this theory by the end of his life. He chose **a researcher-inventor career**.
- [Steven Frayne](#), commonly known by his stage name “Dynamo”, is an English magician performing magic with elements of extrasensory perception, i.e. he can feel certain physical quantities other people are not able to feel. **This is an illusionist career**.

I'd like to add: “Please, do not confuse an **EXTRASENSORY PERCEPTION** with the work of a **CONTACTEE**. But we'll talk about this later” ...

3. The goal setting of this research

The main purpose of this study is **to create the object model of A HUMAN BEING, including basic principles of his creation, general mechanisms and his interaction with the World (in the broadest sense of this word).**

Of course, the developed model should not contradict the earlier studies' results the scientists and philosophers of the different epochs and countries of the world obtained. Such scientists are Nikola Tesla, Edgar Cayce, Edward Tsiolkovsky and many others.

Human beings cognize their Universe step by step. They constantly improve, change or interchange the created mathematical models of various objects, processes or phenomena. And these mathematical models more and more resemble to the real World of human beings or the Universe.

The modern scientists often use the logical laws and their logical judgments in research works are based upon them.

“Logic (from the Ancient Greek: λογική, logikḗ), originally meaning “the word” or “what is spoken” (but coming to mean “though” or “reason”), is generally held to consist of the systematic study of the form of arguments. A valid argument is one where there is a specific relation of logical support between the assumptions of the argument and its conclusion. (In ordinary discourse, the conclusion of such an argument may be signified by words like therefore, hence, ergo and so on.)

There is no universal agreement as to the exact scope and subject matter of logic (see § Rival conceptions, below), but it has traditionally included the classification of arguments, the systematic exposition of the 'logical form' common to all valid arguments, the study of inference, including fallacies, and the study of semantics, including paradoxes. Historically, logic has been studied in philosophy (since ancient times) and mathematics (since the mid-1800s), and recently logic has been studied in computer science, linguistics, psychology, and other fields ..."

The information from Wikipedia — free encyclopedia

Taking into account some details, the author will present his logical arguments in this research.

"A young man in his mid-twenties knocks on the door of the noted scholar Rabbi Shwartz. "My name is Sean Goldstein," he says. "I've come to you because I wish to study Talmud."

"Do you know Aramaic?" the rabbi asks.

"No," replies the young man.

"Hebrew?" asks the Rabbi.

"No," replies the young man again.

"Have you studied Torah?" asks the Rabbi, growing a bit irritated.

"No, Rabbi. But don't worry. I graduated Berkeley summa cum laude in philosophy, and just finished my doctoral dissertation at Harvard on Socratic logic. So now, I would just like to round out my education with a little study of the Talmud."

"I seriously doubt," the rabbi says, "that you are ready to study Talmud. It is the deepest book of our people. If you wish, however, I am willing to examine you in logic, and if you pass that test I will teach you Talmud."

The young man agrees.

Rabbi Shwartz holds up two fingers. "Two men come down a chimney. One comes out with a clean face, the other comes out with a dirty face. Which one washes his face?"

The young man stares at the rabbi. "Is that the test in logic?"

The rabbi nods.

"The one with the dirty face washes his face," he answers wearily.

"Wrong. The one with the clean face washes his face. Examine the simple logic. The one with the dirty face looks at the one with the clean face and thinks his face is clean. The one with the clean face looks at the one with the dirty face and thinks his face is dirty. So the one with the clean face washes his face."

"Very clever," Goldstein says. "Give me another test."

The rabbi again holds up two fingers. "Two men come down a chimney. One comes out with a clean face, the other comes out with a dirty face. Which one washes his face?"

"We have already established that. The one with the clean face washes his face."

"Wrong. Each one washes his face. Examine the simple logic. The one with the dirty face looks at the one with the clean face and thinks his face is clean. The one with the clean face looks at the one with the dirty face and thinks his face is dirty. So the one with the clean face washes his face. When the one with the dirty face sees the one with the clean face wash his face, he also washes his face. So each one washes his face."

"I didn't think of that," says Goldstein. It's shocking to me that I could make an error in logic. Test me again."

The rabbi holds up two fingers. "Two men come down a chimney. One comes out with a clean face, the other comes out with a dirty face. Which one washes his face?"

"Each one washes his face."

"Wrong. Neither one washes his face. Examine the simple logic. The one with the dirty face looks at the one with the clean face and thinks his face is clean. The one with the clean face looks at the one with the dirty face and thinks his face is dirty. But when the one with the clean face sees the one with the dirty

face doesn't wash his face, he also doesn't wash his face. So neither one washes his face."

Goldstein is desperate. "I am qualified to study Talmud. Please give me one more test."

He groans, though, when the rabbi lifts two fingers. "Two men come down a chimney. One comes out with a clean face, the other comes out with a dirty face. Which one washes his face?"

"Neither one washes his face."

"Wrong. Do you now see, Sean, why Socratic logic is an insufficient basis for studying Talmud? Tell me, how is it possible for two men to come down the same chimney, and for one to come out with a clean face and the other with a dirty face? Don't you see?"

The whole question is a foolishness, and if you spend your whole life trying to answer foolish questions, all your answers will be foolish, too."

The Old Jewish Parable about Logic and Wisdom

That is why the author decided to discuss such questions that will be meaningful from his "point of view."

4. The subjective assessment of the goal achieving difficulty

Speculating about the best way to communicate my knowledge to the readers, I understand this goal achieving difficulty. The reasons are the following:

- First of all, I want to deliver such kind of information to the readers, which is initially difficult to express by writing or speech (the explanation of this fact will be given in the second Volume entitled “Hidden Knowledge”);
- Secondly, I want to share my personal world view with my readers, but their world view can deeply vary from my own (the explanation of this fact will be given in the third Volume entitled “Worlds”);
- Thirdly, I want to deliver a kind of information to the readers, which will be the incomplete, “conditional truth”, because I cannot reduce “everything” to writing (for various reasons, including independent of me ones).

“Language we use in everyday life is inappropriate for this purpose. People who had such an experience, as a rule, agree that the basic principle is inexpressible, because the words and the very structure of our language are completely inappropriate for its description, especially, if you try to convey this to a person who did not deal with anything similar before.”

Stanislav Grof

“The Cosmic Game. Study of the boundaries of a human consciousness”

Today human beings use a huge number of words and word-combinations historically connecting with different cultures, doctrines, sciences, religions, schools and traditions of different epochs of the human development. Practically, each and all rely on these various terms and concepts, and tell us about “incarnations”, “chakras”, “karma”, “reincarnations”, “soul”, “spirits”, etc.

As a result, thoughtful readers lose the track of the author's thought already on the first pages and there is even more confusion in their minds than was before studying this work.

“If a person, speaking primitive language, is asked to describe some phenomenon of a modern life by using words and terms of his/her language, the result will be out of way, if we translate this description into a complex language. The Biblical texts, originally written in the language of primitive cattlemen, were translated into more complex languages many times. That,

clearly, did not make them more understandable. In addition, the church, guided by political considerations, repeatedly made adjustments to the Bible for their own needs ...

Most people are unable to realize expressed by more than one sentence thought from the first reading. And the meaning containing in several paragraphs of the tongue-tied text, whose translation from Aramaic into Greek turns into, and the Greek to Church Slavonic translation becomes completely incomprehensible."

www.ksv.ru

5. Main methods of the achieving goal

5.1. The publication of “The New Cosmic Philosophy” books series

The words from the article of Konstantin Eduardovich Tsiolkovsky are the most suitable for my research results. I cite them below:

“I avoid mentioning of similar works in my study. But this does not mean at all that I value only my own works and do not appreciate other men of science. All I am writing, of course, inspired by reading books and works of other authors. My behavior is not selfish and not overconfident. I have irresistible desire to make my and readers life easier without names and references abundance.

It is proved by my refuse of everything I have reported. Let people consider everything as plagiarism - I will have no complaints against it and I do not even claim a patent or assert my priority. May I be the last of people doing this, but it really does not hurt my feelings.”

Konstantin Tsiolkovsky
“Foreword to my works”

1935 г.

I started making the first brief notes of my research in 2007. And in the middle of 2011, I realized that there was a large accumulation of the critical information.

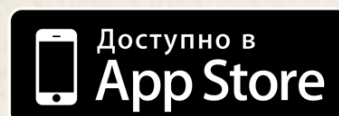

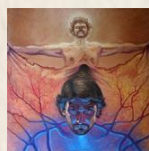

“The thought came upon” and I “began to contemplate”. As a result of long speculations, I decided to describe the “basic level” of information I systematized and to formalize it in a book series.

The title “The New Cosmic Philosophy” for my basic article series (book series) has a definite reason. This title was manifested in my thoughts as a continuation of the philosophical works of Konstantin Eduardovich Tsiolkovsky and Nikola Tesla. And here's why...

In 2011, I familiarized myself with the philosophical works of K. E. Tsiolkovsky for the first time. To my great surprise, I saw that many phrases in my books (articles) draft and phrases from the books of a great scientist and philosopher were as like as two peas. This was the reason to entitle this book series in a such way.

This book series is the result of my long-term studies based both on a personal experience and on the works generalization of many well-known and little-known scientists who contributed to my study of the Universe.

Initially, I planned to distribute my research results by means of on-line versions for iPad, iPhone and iPod touch. I fulfilled this plan and the corresponding applications were in the Apple Store in 2013.

I realized soon that it was wrong. I decided to prepare a specialized site that is www.krasnostup.com, where the basic books were put on the Internet in absolutely free access. They are in PDF format and here are all their volumes:

Volume I «INTRODUCTION»
Volume II – «HIDDEN KNOWLEDGE»
Volume III – «WORLDS»
Volume IV – «BODIES»
Volume V – «THE LIVING»
Volume VI – «ORGANISMS»
Volume VII – «THE HOLY SPIRIT»
Volume VIII – «SPIRITS»
Volume IX – «THE ESSENCE OF LIFE»
Volume X – «CREATURES»
Volume XI – «GODS»
Volume XII– «HUMANS»
Volume XIII – «SOULS»
Volume XIV – «PERSONALITIES»
Volume XV – «MESSAGES»
Volume XVI – «COMMUNICATION»
Volume XVII – «INCARNATION»
Volume XVIII – «MATERIALIZATION»
Volume XIX– «MEMORY»
Volume XX– «MEDITATION»
Volume XXI – «LOOKING FOR THE MEANING OF LIFE OF A HUMAN BEING»
Volume XXII – «THE CONSCIOUS AND THE SUBCONSCIOUS»
Volume XXIII – «OTHER DIMENSIONS, OTHER ENVIRONMENTS, OTHER WORLDS, OTHER BEINGS, OTHER ENTITIES»

Volume XXIV – «MULTIDIMENSIONALITY OF THE UNIVERSE»
Volume XXV – «INFORMATION AND ENERGY»
Volume XXVI – «SPACE AND TIME»
Volume XXVII – «CAUSA CAUSANS OR THE COLORNESS LIGHT»
Volume 001 - «TERMINOLOGY»
Volume 002 - «BIBLIOGRAPHY»

“I am sure when finishing this work, I will be dissatisfied with it. I will have a great desire to write a new one about the same thing, but more fully, more precisely, more convincingly”.

Konstantin Tsiolkovsky
“The Living Universe”

1923 г.

This book series will help everyone to formulate his own subjective idea of “objective reality”. As a result, everyone will be able to independently perceive, to see, to think over, and, eventually, to realize properties of this very reality.

My task is to help the reader to come to a new level of the world understanding, i.e. to look at himself (a human being) from a different point of view. People’s life can “lose its points” without proper understanding of the world” ...

There is a minimum of special terms, a minimum of special formulas in my research...

People are long for simple and clear words having deep historical roots, words, understandable to everyone even at the level of consciousness.

People are long for simple and clear words having profound significance, words that are tested through practice many times and are not simply theoretical speculations.

Therefore, the author wanted to restore the meaning of such notions as “secret knowledge”, “parallel world”, “living being”, “essence”, “creature”, “body”, “organism”, “spirit”, “soul”, “Man”, “God” ...

The reader and time will define how the author managed to do it...

5.2. The usage of terms having deep historical roots

One of the main problems of almost any scientific article dealing with an “unknown” subject is the use of individual words and word-combinations that are unique for each scientist.

This problem is caused by the fact that words researchers use (PERSONALITIES of human beings) have a purely subjective meaning (M-MEANING), i.e. they are initially associated with PERSONal THOUGHTs, expressed in words (WE and the WORD) and related to the problem he described. Thought is a perception, which expressed by “sentences” containing words concepts. That is, the same word can have a different meaning for two persons.

To exclude an AMBIGUITY, the author will pay a great attention to the TERMINOLOGY. It should help to deliver information about the WORLD to each reader (in the broadest sense of this word), information that based on the author's World perception, with a minimum of possible corruptions.

That is why it is better to begin with TERMINOLOGY.

I have been pondered for a long time - which way to use?

The first way is to create and to use new terms. It was the choice of Ron Hubbard (Lafayette Ronald Hubbard), as a result of which many new words in the Russian language appeared, e.g. ридж (ridge), клир (clergy), преклир (preclear), одитор (auditor), кейс (case), бейсик (basic), тэтан (thetan), трак (truck) and many others. These terms represent similarity with different English words that are known to a very narrow circle of specialists. These words initially do not have deep historical roots among those who read and think in Russian, Ukrainian, Belarusian and other Slavic languages.

The second way is to use terms that are already available in our language: body, organism, essence, living being, spirit, ghosts, God, etc.

The author decided to choose the second way. Although, this way is harder than the first one but much more interesting.

“When reading this book, never miss words you do not quite understand. The only reason stops person from studying a subject, the reason he does not understand what is going on or simply is not able to learn is a missed word whose meaning is not clear to him. Confusion and indisposition to digest a school subject result immediately from a puzzling word.”

L. Ronald Hubbard

“DIANETICS”

“The Modern Science about Mental Health”

5.3. The creation of specific nomenclature within the terms employed

“A person has conceptual thinking. We denote every object, phenomenon and event by a word. And we name this word by a concept. As you understood, we denote observed thing by this concept (word, sign or name).”

Yuriy Larichev

[“About the Most Important”](#)

Human beings are able to denote different properties of different objects, processes and phenomena by the same words. They are also able to denote the same properties of objects, processes and phenomena by different words. This is because each person associates the words he/she uses with his/her subjective (individual) meaning.

Every reader understands such terms as “God”, “creature” and suchlike in his own way. Therefore, there is only one way out of this situation: every described object, process or phenomenon in this study will be indicated by the author with a specific word, which is tied to his personal world view. The author will try to convey his understanding of the investigated object, process or phenomenon properties to the reader in a way he “understands” them. A lot of terms will constitute the TERMINOLOGY of this study and the author’s interpretation of them are the corresponding CONCEPTs.

5.4. The focusing on empirical data

A lot of different events happened in my life. The reader can consider them to be randomnesses of “destiny”. I do consider these events to be Regularities, i.e. they are results of interrelated processes and / or phenomena. I will do my best to explain this in the next “The New Cosmic Philosophy” book series.

Please, pay attention to the EMPIRICAL way of information obtaining. It will be described in “The New Cosmic Philosophy” book series i.e. this information can refer to scientific data.

*“**Empiricism** is a theory that states that knowledge comes only or primarily from sensory experience. Empiricism emphasizes the role of empirical evidence in the formation of ideas, over the notion of innate ideas or traditions; empiricists may argue however that traditions (or customs) arise due to relations of previous sense experiences”.*

The information from Wikipedia — free encyclopedia

**Randomness is
the result of processes and / or phenomena
interaction with the Universe.
A person fails to realize their interrelation.**

**Objective laws
are the results of processes and / or phenomena
interaction with the Universe.
A person manages to realize their interrelation.**

**Empirical regularities
is systematized knowledge based only on
experimental data. It likely predicts the result by
means of interrelated processes and / or phenomena
overlapping (coincidence).**

Terms that are connected with the concept of the UNIVERSE, described in the third “WORLD” Volume of “The New Cosmic Philosophy” series in more detail (author's note).

5.5. The basic strategies of “right” arguments construction

*“For we are not all of one mind, **and evidence or knowledge is an individual experience**”.*

*“In giving that as we find that may be helpful in such an experience, first they of the group should each determine within their own mind **WHAT** is evidence; and then be sure that is **NOT** evidence to thy neighbor. For we are not all of one mind, and evidence or knowledge is an individual experience - and must be experienced”.*

Edgar Cayce

“Readings” (5753—2)

*When reading a task specification for the first time, I immediately realized how its “right” answer looks like. I specifically identified here the verb “looks”, because this is the case **a “right” answer looks like that for us!!!**”*

Oleg Nakonechny

“Point’s geometry”

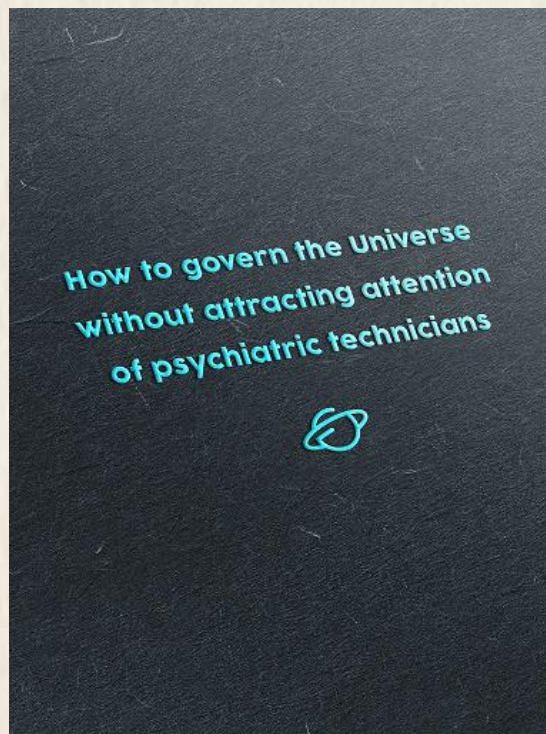

2013 г.

5.6. The understanding of the author's puzzle

*"A question that sometimes drives me hazy:
Am I or are the others crazy?"*

[Albert Einstein](#)

For many people, my intentions to create this book series became comparable to the book writing, the cover page of which is shown below (a truth is often told in a joke):

Despite everything, I know that my books will find their readers.

5.7. The necessity of readers' efforts

"Please, be attentive, make every effort to learn and to understand this subject. It is hardly enough my energy to convince you. Join energy both your own and your friends. I will not press any authorities for my work, except for the authority of exact science, since there are philosophers of completely opposite opinions. There is no postulate or a point that would not be disproved by authorities at all. They rejected Socrates and all philosophers, they rejected railways, sewing machines and all other inventions. Reflect on the history of science and technology development. There is no idea that would not be rejected by authorities at one time.

You will be rewarded for your effort and attention, I will not say a hundredfold, because it is too little, but too immense. There are no words to express the benefits you'll receive for your work. There is no measure for these benefits. This measure is infinity."

Konstantin Tsiolkovsky
"The Living Universe"

1923 г.

"There are three difficulties in study: misunderstood word, masslessness and non-compliance with a gradual approach. All studies problems can be reduced to these three difficulties provided that student is initially interested in study. He does not realize that he already knows everything and besides, he is self-determined in his decision to learn. The most insidious of all three difficulties is a misunderstood word. You read a paragraph, you meet a word, in your opinion, you misunderstand and specifically, do not cope with its meaning. Sooner or later, you will discover that you cannot concentrate and the whole text seems to be meaningless.

The problem is not in misunderstood words you distinguished as "incomprehensible" or "half understood". You can easily beat out the meaning of such words if you start rereading as soon as realizing that you missed the right meaning of the word. The word you understand only in one sense, but it being used in the text with another meaning... that leads to nonsense. Unaware of this, you continue reading. Sooner or later, you will be bored with the whole book, so you will be ready to throw it away. But you do not know because of which word! Because it did not seem incomprehensible to when reading."

"... if you are overcome with boredom and can no longer concentrate on the text you were interested in before, there is no denying that you misunderstood one word. My advice: you should return to the place you were still interested in when reading, and look more closely at it. Sooner or later, you will find a word you could swear that you know, but in the fact, it has completely different meaning in this context. Therefore, you open a dictionary and clarify this word with all its definitions, then read again a part of the text follows this word. After doing this, the text will be as fascinating for you as it was before. There will be no trace of boredom and absent-mindedness."

L. Keene

"Scientology. Is it More than a Cult?"

Part 2. "Fundamental Propositions without Secrets"

6. I will tell you what I know

The young rabbi was an avid golfer. Even on Yom Kippur, the holiest day of the year, he snuck out by himself for a quick nine holes. On the last hole, he teed off, and a gust of wind carried his ball directly over the hole and dropped it in for a hole in one.

An angel who witnessed this miracle complained to God:

“This guy is playing golf on Yom Kippur, and you cause him to get a hole in one?”

This is a punishment?”

“Of course, it is,” said the Lord smiling, “who can he tell?””

Thomas Cathcart, Daniel Klein

“Plato and a Platypus Walk into a Bar . . . : Understanding Philosophy Through Jokes”

7. The control of the books' content renewal

The author reserves the right to make changes to the books he publishes at any time and in any volume you want.

That is why, there are lines with copyright in each volume (at the bottom of the second page), ending with the designation like Rev.19052015. This designation means the date the author made the most recent changes to the text of this volume. It allows readers to control the availability of book series updates.
